Comments of PacketHop, Inc.

PacketHop, Inc., (PacketHop) hereby submits comments in support of the Petition filed by the National Public Telecommunications Council (the “Petition”) to reconsider the Commissions Memorandum Opinion and Report and Third Report and Order in the above mentioned proceeding.

PacketHop supports all the comments filed in the referenced Petition. As a supplier of mobile broadband ad hoc networking and applications for public safety, PacketHop believes that the comments in the NPSTC filing, if adopted, will enhance incentives for the 802.11 manufacturers to leverage knowledge and manufacturing methods of their product lines and to provide low cost and reliable devices and also promote uniform technology standards nationwide and coordination of services to the public safety community. Leveraging the technologies of standards-based wireless local area network products also allows public safety to tap into ongoing engineering innovations.

PacketHop urges the Commission to review the petition filed by the National Public Safety Telecommunication Council and adopt the proposed changes which would enable technologies similar to the existing commercial public wireless local area networks applicable for use in the 4940-4990 MHz band.

Respectfully submitted,
PacketHop, Inc.
